## Project Presentation (Funding and Partners)

The **AUTHERAPIES** project is funded by the Erasmus+ Programme of the European Union, has a planned duration of 36 months, and involves the following partners:

- Villablanca Foundation (Spain)
- European Platform for Rehabilitation (Belgium)
- Medical University of Silesia (Poland)
- Istituto dei Sordi di Torino (Italy)
- Open Europe Educational Programmes Association (Spain).

Co-funded by  
the European Union

- Autism has an estimated **prevalence** of approximately **1%** in the European population.
- Care services are often **limited**, and many professionals are **not specialized** in autism interventions.
- Many autistic individuals and their families turn to therapies that lack scientific evidence and may be **ineffective or even harmful**.
- Studies show that **50-75 % of children** with autism use some complementary or alternative type of medicine in an effort to improve symptoms [1]. Approximately half of these children use biology-based therapies, 30% use mind-body therapies, and 25% use manipulation or body-based therapies [2].

## BIOLOGICAL TREATMENTS WITHOUT EVIDENCE

Up to 40% of children with autism receive biological treatments without scientific evidence

|                             |                                   |
|-----------------------------|-----------------------------------|
| Chelation                   | Vitamin supplements               |
| Lupron                      | Consumption or raw camel milk     |
| Hyperbaric oxygen           | Marijuana                         |
| Gluten and casin free diets | Nicotine patches                  |
| Stem cell therapy           | MMS (bleach)                      |
| Secretine injections        | Urine (Placeres Method)           |
| Antifungal agents           | Transcranial magnetic stimulation |

## Best clinics for autism treatment abroad

We are pleased to provide you with information on the top three hospitals most popular among patients for their high success rates:

| Hospital                | Location    | Duration | Price        | Doses       |
|-------------------------|-------------|----------|--------------|-------------|
| Georgia, Mardaleishvili | Georgia     | 5 days   | \$15,000 USD | 1 dose only |
| Netherlands, Eindhoven  | Netherlands | 4 days   | €18,000 EUR  | 1 dose only |
| Turkey, Istanbul        | Turkey      | 7 days   | €19,000 EUR  | 2 doses     |

- Approximately 30% of children with autism receive **non biological therapies without scientific evidence**, such as:

|   |                                    |
|---|------------------------------------|
| Horse therapy (without validated physiotherapeutic goals) | Prism glasses                      |
| Dolphin therapy   | Tomatis Method                     |
| Holding therapy   | Family constellations              |
| Attachment repair therapies                               | Neuro-Linguistic Programming (NLP) |

## Specific Objectives

- Develop accessible and adapted training tools (following W3C accessibility standards).
- Disseminate these tools and promote the use of evidence-based therapies across Europe.
- Promote the active involvement of autistic individuals in decisions about their treatment.
- Integrate evidence-based decision-making into the training of health and education professionals.

Co-funded by  
the European Union

ŚLĄSKI  
UNIwersYTET  
MEDYCZNY  
W KATOWICACH

- Systematic review of the scientific evidence on autism interventions from the past five years
- Initial needs assessment survey administered to autistic individuals, families, and health and education professionals and students to formulate the review questions and create the database.
- Online evidence based database of interventions for autism
- Development of a list of competences to be reached about evidence based interventions and a packet of training materials
- Policy brief production and dissemination

Co-funded by  
the European Union

## Professionals are highly specialized en autism interventions

**Professionals provide understandable and comprehensive explanations about the interventions.**

**Professionals are very helpful when choosing among different interventions for autism.**

- Development of a training package of digital content, available in a web-based environment in multiple languages, accessible to autistic individuals, their families, and professionals, particularly those in the healthcare and educational fields.
- A compilation of evidence-based therapies and treatments presented in accessible language.
- Providing tools to identify interventions that may be ineffective or counterproductive.
- Empowering autistic individuals and their families to make informed decisions about their treatment and the management of their own health.
