Using AI and technology to create pathways to employment for underserved communities.

What did we learn?

- AI is creating new opportunities for accessibility and employment.
- Accessibility can now be personalised at scale.
- Trust, skills and support matter as much as technology itself.
- AI is not only a technology challenge. It is also a learning challenge.

Using AI and technology to create pathways to employment for underserved communities.

From Accessibility to AI Empowerment

- Accessibility matters.
- Digital skills matter.
- AI skills are becoming the next inclusion challenge.
